Total		Rs. 48326.81	Rs. 1574.95	Rs. .00	Rs. .00	Rs. 1702.39

Asset Allocation

Asset Allocation is about diversifying your investments across different asset classes like equities (shares) & debt (bond instruments); in order to optimize the risk-return balance on your portfolio.

When you diversify across asset classes, you give yourself the margin or flexibility to counter market uncertainties. It also ensures that poor performance of any one asset class doesn't jeopardize your entire investment plan.

Factors that affect asset allocation

The asset allocation decision is based upon your risk appetite. Risk appetite basically says how much risk you can tolerate on your investments so as to achieve optimum return. Some of the indicators that give an insight into your risk appetite are described below:

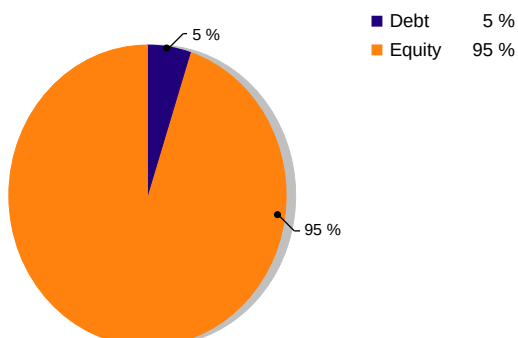

1. **Age :** Your age is the single greatest indicator of your risk appetite. A young person will have a higher risk appetite when compared to an older person; because of lesser responsibilities and a longer investment horizon.
2. **Investment Horizon :** People of the same age may not have the same risk appetite if their investment horizons are different. For example, a 30 year old with a 3 year investment horizon would have a lower risk appetite when compared to a 30 year old with a 25 year horizon.
3. **Personal circumstances :** It is possible at times that there is a change in your personal circumstances which might inspire you to change your strategy. For example, If there is an increase in liabilities, you might choose to take less risky assets so as to mitigate risk on your investments.

Your Portfolio Statement

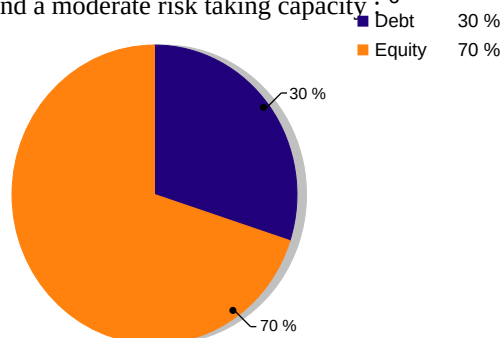

Current Asset Allocation

On analysis of your current allocation, we observe that the Debt-Equity mix of your portfolio is:

Ideal Asset Allocation

Here we provide you an asset mix that is ideal for your age, considering a 10-30 year time horizon and a moderate risk taking capacity⁶.

Therefore, to achieve the Ideal Asset Allocation, you would need to Decrease your equity component from 95% to 70%. You can do this by switching between the funds available in your policy(ies).

Online Switch:

You can switch your funds online on our website www.iciciprulife.com Login with your ePIN > go to online transaction > select switch> execute switch. If you do not have an epin, you can generate it by clicking <http://www.iciciprulife.com/fpw/index.jsp>

Visit www.iciciprulife.com to access a world of information in a few clicks. Our website provides a range of services like online premium payment, statement downloads, fund switches and lots more. Log onto www.iciciprulife.com to get your policy information anytime, anywhere.

Are you sufficiently insured?

It is vital for you to have an insurance cover which is in sync with your individual net worth. What is most important is to arrive at the optimum amount of insurance you require. To calculate this insurance amount, we use the concept of Human Life Value, through which, a certain worth can be attributed to the financial support that you provide to your parents, spouse or children. It can be used as a benchmark⁷ to arrive at the amount of insurance you need to provide your family with adequate finances and security, even in your absence.

Age (years)	32
HLV Multiple (corresponding to your age)	10
Insurance required (HLV)	10 * Current Annual Income
