GTX - GB

Global health care exchange is a health management system.

Application main aim is bringing together hospitals, suppliers, distributors and GPO.

Here the buyers are hospitals and suppliers are distributors and bulk drug manufacturers. The system aggregated data for suppliers and buyers.

The Application is divided into five categories

① Purchase order:

Here the buyer (Hospitals) can place an order for drugs, by selecting the respective suppliers (dropdown list), the hospital which has purchased the package should use one license key to enter application for raising a order.

Here the buyer can be a (administrator/or user/s created by admin).

The raised purchased order should be exceed the limit put by admin, if it exceeds also should accept the order, but with a warning to admin or buyer account id through a email.

Here the application displays negative balance on exceeding the limit.

Template management :

New Template :

A purchase order can be raised from new template of TM and also be saved within raising and placing the order and can be used for future purposes.

New template is more as purchase order screen.

Existing templates

It shows the templates that have been saved with line items (drugs of buyer choice) and can be modified by deleting and adding new line items from product search menu.

Here the line items can be selected based on selected supplier/s and their items.

The line items can be selected and quantity and price can be placed by the buyer.

Order management :

The buyer/supplier can check for respective orders placed or revised.

The orders can be checked according to respective dates selected by the end-user. The supplier list will be displayed so as to search according to respective supplier.

Product Search :

If a user has to search for line items (drugs placed by a supplier) then search has to be done based on ~~tags~~, keywords, suppliers and preciselists.

The respective search makes the buyer to search quickly and select the items.

The German users has a options additional compared to english user.

Catalogue Template:

Here the supplier's given an option to download a template, fills the line items and place or upload the same template to the applications. respective details are shown for a supplier.

Administration :-

The Buyer has option of changing password. If the buyer is a administrator, then he can create, delete buyers, search only other 2 admining according to his will. The admin can be also a buyer and can raise purchase-orders.

The admin can create a search-only user who has a option of product search and ~~template~~ administration.

Super User of G4XGB

The Super user has control over all buyer/supplier and can give/remove options to them, which makes some modules enable or disable.

The Superuser cannot raise P.O's.

The Superuser can ~~delete~~ user/create users and suppliers.

~~The Super~~ Local testing :

The Application has to be tested on German language along with English.

German testing has to be done as users are more in German.
