NAME

     symrcopy - Performs Symmetrix Remote Copy control
                operations on a collection of devices in a
                device file.

SYNOPSIS

     symrcopy [-h]

     symrcopy <-file <FileName> [-noprompt] |
          -noprompt 'redirect stdin'> [-star]
          [-i <Interval>] [-c <Count>]

        create {-push {-hot|-cold} [-differential] |
          -pull {-hot [-donor_update] |-cold} }
          [-name <Name>] [-copy]
```

```
          [-force_copy] [-pace <Pace>]

        remove

     symrcopy <-file <FileName> [-noprompt] |
          -session_name <SessionName> [-noprompt] |
          -noprompt 'redirect stdin'>
          [-v] [-force] [-star] [-i <Interval>] [-c <Count>]

        activate [-vxfs <MountPoint...>] |
          [-ppath <SRCDEVS | PowerPath device...>] |
          [-rdb -dbtype DbType [-db DbName]] |
          [-consistent]

        recreate [-name <Name>] [-pace <Pace>]
 [1;7m--More-- [m

 [K
        rename   -name <Name>

        set mode {copy|nocopy}

        set pace <Pace>

        terminate [-symforce] [-all_sessions]

     symrcopy [-v | -noprompt] [-i <Interval>] [-c <Count>]

        set ceiling <Ceiling> -sid <SymmID>
          -dir <#|ALL> [-port <#|ALL>]

     symrcopy [-sid SymmID] [-i <Interval>] [-c <Count>]

        list [-offline] [-detail | -wwn]

        list ceiling [-dir <#|ALL>] [-port<#|ALL>]

     symrcopy <-file <FileName> | -session_name <SessionName>
          -noprompt 'redirect stding'>
          [-offline] [-i <Interval>] [-c <Count>] [-star]

        query [-detail | -wwn]

        verify [ -createinprog | -created | -recreateinprog |
          -recreated | -copyinprog | -copyonaccess |
          -copyonwrite | -copied | -terminateinprog |
          -failed | -verifyinprog ]

     symrcopy [-noprompt] [-sid SymmID]

 [1;7m--More-- [m
        export -file <FileName> -session_name <SessionName>

OPTIONS

     -all_sessions  Terminates all sessions associated with
                    the control device.  Remote devices in the
                    control file are ignored.
```

-c	Runs the specified query this many times. (Defaults to forever if -i is specified)
-cold	Indicates that any directors that are mapped to the local device and can reach the targets may be used. Therefore, the source devices must be set to User Not Ready. Also, on a push, there may be up to 16 targets.
-consistent	Causes the source and target pairs to be consistently copied.
-copy	Causes the device copy to take place in the background. Normally, the copying of tracks is not completed unless all tracks have been accessed during a pull, or all tracks have been written during a push. Used with create. After the operation is executed, the state of the device pair is Copy in Progress. If all the tracks are eventually moved to

[1;7m--More-- [m

	the Target device, the state changes to Copied.
-db	Specifies the name of the relational database. This option is not required for Oracle.
-dbtype	Specifies the relational database type.
-detail	Specifies a more detailed list or query. May not fit in some displays.
-differential	Allows a session to be recreated for incremental copy. A session created without -differential cannot be recreated for incremental copy.
-dir	Sets the director number on which to list or set the ceiling. For list and set ceiling.
-donor_update	Causes data written to the control device during a hot pull to be written to the remote device as well.
-file	Specifies a file that contains device pairs for the symrcopy command. A device pair is a control device and a remote device. Note that data flows from the control to the remotes on a -push, but on a -pull, data flows from the remote to the control.

[1;7m--More-- [m

[K

Control devices and remote devices may be specified as LUN World Wide Names or Symmetrix or CLARiiON device names.

Valid tags are symdev, clardev, and wwn.

Only use white space to separate source and remotes.

Lines that start with a pound sign (#) are ignored. Control devices are always in the left hand column, and remotes are always in the right.

The usual file format will be:

symdev=<SymmID>:<DevName> wwn=<LUN WWN>
...
...

To specify more than one target per source device, include more records, indicating the new remote while duplicating the source device. Valid only for -push -cold.

-force Attempts to force the operation even though one or more paired devices in the device file may not be in the normal, expected state(s) for the specified operation.

-force_copy Attempts to force a create operation even
[1;7m--More-- [m
though one or more paired devices in the device file may not be large enough to contain the whole extents of the control device on a push, or the whole extents of the remote device on a pull.

If the operation is a pull, and the control device is too small, the session will be created so that it will only copy the total number of blocks that will fit into the control device.

If the operation is a push, and the remote device is too small, the session will be created so that it will only copy the total number of blocks that will fit into the remote device, if it is visible to the API host.

-hot Indicates that all directors that are mapped to the local device must be able to reach the targets. The source devices may be Read Write.

Also, on a push, there may be only 1 target.

-i — Runs the specified query repeatedly with this many seconds between iterations. (Defaults to 10 seconds if -c is used; 5 seconds is the minimum).

-name — Indicates a name when creating or
[1;7m--More-- [m
recreating a session.

-offline — Relies on information from the database for updated session information; does not query the Symmetrix array. Used with list or query.

-pace — Sets the pace value used for the session For create and recreate.

-port — Sets the port number on which to list or set the ceiling. For list and set ceiling.

-ppath — Lists one or more PowerPath devices for which I/O is to be suspended just before the activate is performed and resumed as soon as the activate completes. As an alternative to the list, you can use the keyword SRCDEVS, which will specify to use the path names from the standard devices being controlled.

-pull — Pulls data from the remote to the control device when the session is created with the -pull flag.

-push — Pushes data from the control to the remote device(s) when the session is created with the -push flag.

-rdb — Freezes the log files and the specified database just before the activate is performed and thaws them as soon as the
[1;7m--More-- [m
activate completes.

The host physical devices that the database log files reside must be PowerPath devices.

-session_name — Specifies the name of the session (or group of sessions) that you want to control - when accessing a session by session name.

-star — Allow control operations on devices that are in RDFA star mode.

-symforce — Terminates a session that has not yet

finished copying. Use only with
-terminate.

-v Provides a more detailed, verbose listing.

-vxfs Lists one or more Veritas VxFS filesystem mount points. The filesystem(s), mounted on this host, will be frozen just before the activate is performed and thawed as soon as the activate completes.

-wwn For list or query, display remote devices as WWN's.

PARAMETERS

Ceiling The percentage of director/port bandwidth allowed for open replicator usage.

[1;7m--More-- [m

[K

DbName The relational database name.

DbType The relational database type. Possible values are:

Oracle
SQLServer
Sybase
Informix
IBMUDB

FileName The name of the file that contains the source and target pairs.

MountPoint The file system mount point.

Name An optional name that can be ascribed to a session.

Pace The pace value assigned to the session during create, recreate or set pace commands

SessionName A previously assigned name used to control a session.

root@hsunsumm02# symrcopy -h|more

NAME

symrcopy - Performs Symmetrix Remote Copy control operations on a collection of devices in a device file.

SYNOPSIS

symrcopy [-h]

symrcopy <-file <FileName> [-noprompt] |

```
          -noprompt 'redirect stdin'> [-star]
          [-i <Interval>] [-c <Count>]

       create {-push {-hot|-cold} [-differential] |
          -pull {-hot [-donor_update] |-cold} }
          [-name <Name>] [-copy]
          [-force_copy] [-pace <Pace>]

       remove

    symrcopy <-file <FileName> [-noprompt] |
         -session_name <SessionName> [-noprompt] |
         -noprompt 'redirect stdin'>
         [-v] [-force] [-star] [-i <Interval>] [-c <Count>]

       activate [-vxfs <MountPoint...>] |
          [-ppath <SRCDEVS | PowerPath device...>] |
          [-rdb -dbtype DbType [-db DbName]] |
          [-consistent]

       recreate [-name <Name>] [-pace <Pace>]
[1;7m--More-- [m

[K
       rename   -name <Name>

       set mode {copy|nocopy}

       set pace <Pace>

       terminate [-symforce] [-all_sessions]

    symrcopy [-v | -noprompt] [-i <Interval>] [-c <Count>]

       set ceiling <Ceiling> -sid <SymmID>
          -dir <#|ALL> [-port <#|ALL>]

    symrcopy [-sid SymmID] [-i <Interval>] [-c <Count>]

       list [-offline] [-detail | -wwn]

       list ceiling [-dir <#|ALL>] [-port<#|ALL>]

    symrcopy <-file <FileName> | -session_name <SessionName>
         -noprompt 'redirect stding'>
         [-offline] [-i <Interval>] [-c <Count>] [-star]

       query [-detail | -wwn]

       verify [ -createinprog | -created | -recreateinprog |
          -recreated | -copyinprog | -copyonaccess |
          -copyonwrite | -copied | -terminateinprog |
          -failed | -verifyinprog ]

    symrcopy [-noprompt] [-sid SymmID]

[1;7m--More-- [m
       export -file <FileName> -session_name <SessionName>
```

OPTIONS

-all_sessions	Terminates all sessions associated with the control device. Remote devices in the control file are ignored.
-c	Runs the specified query this many times. (Defaults to forever if -i is specified)
-cold	Indicates that any directors that are mapped to the local device and can reach the targets may be used. Therefore, the source devices must be set to User Not Ready. Also, on a push, there may be up to 16 targets.
-consistent	Causes the source and target pairs to be consistently copied.
-copy	Causes the device copy to take place in the background. Normally, the copying of tracks is not completed unless all tracks have been accessed during a pull, or all tracks have been written during a push. Used with create. After the operation is executed, the state of the device pair is Copy in Progress. If all the tracks are eventually moved to

[1;7m--More-- [m

	the Target device, the state changes to Copied.
-db	Specifies the name of the relational database. This option is not required for Oracle.
-dbtype	Specifies the relational database type.
-detail	Specifies a more detailed list or query. May not fit in some displays.
-differential	Allows a session to be recreated for incremental copy. A session created without -differential cannot be recreated for incremental copy.
-dir	Sets the director number on which to list or set the ceiling. For list and set ceiling.
-donor_update	Causes data written to the control device during a hot pull to be written to the remote device as well.
-file	Specifies a file that contains device pairs for the symrcopy command. A device

pair is a control device and a remote device.

Note that data flows from the control to the remotes on a -push, but on a -pull, data flows from the remote to the control.
[1;7m--More-- [m

[K

Control devices and remote devices may be specified as LUN World Wide Names or Symmetrix or CLARiiON device names.

Valid tags are symdev, clardev, and wwn.

Only use white space to separate source and remotes.

Lines that start with a pound sign (#) are ignored. Control devices are always in the left hand column, and remotes are always in the right.

The usual file format will be:

symdev=<SymmID>:<DevName> wwn=<LUN WWN>
 ...
 ...

To specify more than one target per source device, include more records, indicating the new remote while duplicating the source device. Valid only for -push -cold.

-force Attempts to force the operation even though one or more paired devices in the device file may not be in the normal, expected state(s) for the specified operation.

-force_copy Attempts to force a create operation even
[1;7m--More-- [m
though one or more paired devices in the device file may not be large enough to contain the whole extents of the control device on a push, or the whole extents of the remote device on a pull.

If the operation is a pull, and the control device is too small, the session will be created so that it will only copy the total number of blocks that will fit into the control device.

If the operation is a push, and the remote device is too small, the session will be created so that it will only copy the total number of blocks that will fit into the remote device, if it is visible

to the API host.

-hot Indicates that all directors that are mapped to the local device must be able to reach the targets. The source devices may be Read Write.

Also, on a push, there may be only 1 target.

-i Runs the specified query repeatedly with this many seconds between iterations. (Defaults to 10 seconds if -c is used; 5 seconds is the minimum).

-name Indicates a name when creating or
[1;7m--More-- [m
recreating a session.

-offline Relies on information from the database for updated session information; does not query the Symmetrix array. Used with list or query.

-pace Sets the pace value used for the session For create and recreate.

-port Sets the port number on which to list or set the ceiling. For list and set ceiling.

-ppath Lists one or more PowerPath devices for which I/O is to be suspended just before the activate is performed and resumed as soon as the activate completes. As an alternative to the list, you can use the keyword SRCDEVS, which will specify to use the path names from the standard devices being controlled.

-pull Pulls data from the remote to the control device when the session is created with the -pull flag.

-push Pushes data from the control to the remote device(s) when the session is created with the -push flag.

-rdb Freezes the log files and the specified database just before the activate is performed and thaws them as soon as the
[1;7m--More-- [m
activate completes.

The host physical devices that the database log files reside must be PowerPath devices.

-session_name Specifies the name of the session (or group of sessions) that you want to control - when accessing a session by

session name.

-star Allow control operations on devices that are in RDFA star mode.

-symforce Terminates a session that has not yet finished copying. Use only with -terminate.

-v Provides a more detailed, verbose listing.

-vxfs Lists one or more Veritas VxFS filesystem mount points. The filesystem(s), mounted on this host, will be frozen just before the activate is performed and thawed as soon as the activate completes.

-wwn For list or query, display remote devices as WWN's.
