

IMPORTANT

Requirements for Host Discovery

SRM Collector Host:

Windows

To collect data from windows servers, the collector itself must be running on a windows machine. Please refer to the Remote Shell Collector Administration Guide for further details.

UNIX

In order to discover Unix hosts using SSH Private/public key pair, please install private keys in collector folder. Place the generated keys in the RSC conf folder `/opt/APG/Collecting/Remote-Shell-Collector/instance_of_collector/conf`
