

Global Storage Mgt – APAC

Automation and Reporting - Alert / Monitoring

Objective

Objective of this presentation is to document and explain

- The in-house-generated scripts and programs.
 - How to use the scripts and the outputs derived.
 - How these scripts could be used to generate reports.
 - How to do health checks of storage subsystems
 - How some of these scripts are automated and how the alerts are implemented.
- Also to reduce considerable amount of time for Storage administrators in the day to day BAU.

Scope

- This scripts are written and automated using Unix shell scripts
- Management hosts in SG & HK.
- This covers, general day-to-day Storage administration tools, diagnostics, report generation, Alert implementation etc.
- This is designed or aimed to have ease of use, to alleviate manual commands, and also to save time by automation of validations.

SCRIPT TITLE : `symm_dev_allocation.ksh`

CATEGORY : Reporting

DESCRIPTION : Generate allocation report via symaccess and symmaskdb outputs

ARGUMENTS : Symmetrix ID

TECHNOLOGY : EMC DMX/VMAX

ACTION : Save to reports folder (.out file with all device info, .xls file with total capacity for each server)

SCHEDULE : Weekly

SAMPLE OUTPUT

```

SCRIPT TITLE : vsp_pool_mon.ksh

CATEGORY : Monitoring

DESCRIPTION : Retrieve thin pool info via Raidcom for all VSP frames

ARGUMENTS : N/A

TECHNOLOGY : HDS

ACTION : Send email to group DL with consolidated info for daily monitoring of pool usage

SCHEDULE : Daily

SAMPLE OUTPUT

=====
