

Position: Senior Java Software Developer

About Us

FlexTrade is a dynamic and fast growing company looking to hire dynamic and passionate individuals to grow its development team.

Founded in 1996, FlexTrade Systems is the global leader in broker-neutral algorithmic trading platforms and execution systems in equities, foreign exchange and listed derivatives.

FlexTrade introduced the first trading system that allowed clients to control and customize their propriety algorithms. FlexTrade allowed them to maintain the confidentiality of their trading strategies through a vendor-provided, broker-neutral platform. We now have a varied product suite that includes new trading systems, risk-management and analytical tools. Our client base includes over 175 buy- and sell-side firms, including many of the largest investment banks, hedge funds, asset managers, commodity trading advisors and institutional brokers.

With its growing portfolio, a new team has been setup in Singapore to extend the existing platform and support its Asia customers locally.

Scope and Responsibilities

- ✚ Experience developer required for a team to extend a FX platform. The team will be extending, a front end based on Java Swing framework (fat client).
- ✚ Develop, support, maintain and fix the existing code for the FX trading platform
- ✚ Test codes of peers
- ✚ Help and support other developers in the team

Requirements and Experience

- ✚ Strong passion in programming
- ✚ Knowledge of code design
- ✚ Test driven development (TDD)
- ✚ Strong familiarity in using
 - o Maven
 - o Lombok
 - o Swing
- ✚ Team player
- ✚ Willing to do tasks outside of this scope
- ✚ Nice to have: FX Trading knowledge
- ✚ Nice to have: Application of agile methodologies
- ✚ Candidate is to note that this is NOT a “start from scratch” project. It is an extension, development and improvement of the existing code base.
